ANNOTATIONS · PROFILE

README.md

Backend engineer with **7+ years** in software engineering and **5+ years** specialising in backend systems at scale. Designs and builds distributed systems handling 17M+ daily events, leads cross-functional teams, and drives architectural decisions for mission-critical platforms. Technical Lead at VNG since April 2026, managing a 7-person backend, frontend and QE team. Expert in Golang, event-driven architectures and workflow orchestration; bridges technical implementation and business requirements through direct stakeholder collaboration.

↳ Senior Software Engineer									1y 8m

company=VNG Corporation

team=Game Publishing Platform

team.size=7 (BE · FE · QE)

scale=17M+ events/day

- BUILD
- Architect and develop SaaS solutions for the Game Publishing Platform — automated campaign rollouts, user segmentation and multi-channel notifications for VNG's flagship titles.
- SCALE
- Design and implement systems processing **17M+ requests/events daily** with high availability and performance.
- DESIGN
- Lead architecture of the **Segment Service**: a dynamic query builder for extracting user segments from the data warehouse, on a scalable pipeline supporting diverse business use cases.
- PERF
- Architect the **Orchestration Journey Service**: event-driven workflow automation that triggers real-time in-app, SMS and email interactions from behavioural conditions; tuned Temporal to hold a **<3s latency SLA at 200 req/s with 99.95% uptime**.
- PERF
- After the Temporal persistence move from Cassandra to Vitess (sharded MySQL) in June 2026, led the capacity & SLA campaign (45+ load tests): raised the load-tested clean ceiling **1.75x to 700 events/s (~2,620 workflow starts/s)** with every Temporal layer at **p95 under 400ms** and database p95 ~4ms.
- LEAD
- Promoted to Technical Lead (Apr 2026); scope expanded from a team of 3 engineers to managing a **cross-functional team of 7** (backend, frontend, QE); own roadmaps aligned with product milestones.
- LEAD
- Reworked team operations so members spend more time on technical solution practice, raising motivation and dedication across the team.
- AI
- Drove full adoption of AI across the SDLC: built Go MCP servers giving AI agents access to platform debugging tools and test/staging APIs, plus custom agents for MR review, deployment and Jira refinement.
- BUILD
- Maintain the shared Go platform library used across the team's services (observability, Temporal, Kafka, data clients).
- LEAD
- Lead technical discussions with game studios — translate business requirements into technical specs; coordinate with Product Owner and Data Studio teams.

company=Vulcan Labs teams=2 cross-functional team.size=4 engineers scale=1.5M+ req/day

- LEADPromoted Backend Engineer → Senior Engineer (Aug 2022) → Team Leader (Jul 2023); led 2 cross-functional teams of backend engineers and AI researchers delivering AI-powered mobile apps to global users.
- OWNOwned all API servers for the mobile apps, handling 1.5M+ daily requests from users worldwide.
- DESIGNTurned Marketing/Product requirements into technical designs; oversaw end-to-end development and deployment of AI services.
- BUILDEstablished the codebase architecture on Clean Architecture principles; built internal libraries for service reliability and consistency.
- OPSRan containerised services on GKE with Grafana/Prometheus monitoring and DDoS protection via Cloud Armor and Cloudflare.
- DATADesigned and built ETL pipelines for marketing metrics aggregation and visualisation.

SERVICES · KEY PROJECTS

status: all green

- Game Publishing Platform — Orchestration & Segmentation

VNG

 - Event-driven architecture for real-time campaign orchestration handling 17M+ daily events.
 - Dynamic segmentation engine with a configurable query builder over the data warehouse.
 - Temporal-based workflow automation for complex multi-step campaign journeys.
 - <3s latency SLA at 200 req/s with 99.95% uptime for real-time interaction triggers.
 - Load-tested capacity of 700 events/s (~2,620 workflow starts/s) on Temporal + Vitess, p95 under 400ms per layer.
- AI Ecosystem Platform

Vulcan Labs

 - Cross-platform ecosystem consolidating AI products under unified subscription management.
 - User management and subscription systems supporting multi-platform access.
 - Credit-based monetisation with fraud prevention and automated renewal handling.
- AI Chat Smith — high-scale ChatGPT service

Vulcan Labs

 - Mobile-optimised ChatGPT service handling 1.5M+ daily requests from global users.
 - Cost-optimised API layer with abuse prevention and robust error handling.
 - Deployed on GKE behind Cloud Armor with a full observability stack.
